AIRplus® GTI - Doubled performance.

AIRplus® GTI from Storopack

represents a new

performance

standard: the machine

processes up to 23

metres of air-cushioning

film per minute. This is

almost double the rate for the

standard available in the market

so far. The system is highly suitable for so

called "speed lines", which are common within the new

generation of automated logistics companies.

AIRplus® GTI processes the entire range of varying AIRplus® films. Each application has different widths and lengths, for cavity filling, wrapping and padding. Our cushion film with a width of 400 mm, for example, is particularly suitable for wrapping packaged goods. Companies which replace bubble wrap from the roll with this material save on costs for storage and logistics, as the cushion film is manufactured 'on demand'.

AIRplus® GTI with 400mm width film.

AIRplus® by **STOROPACK**

The material used for all AIRplus® films is a co-extruded quality film with a three-layered structure. Compared to mono-extruded plastics, the material consumption is reduced, the elasticity is increased and the low permeability ensures that the air-filling is not lost.

AIRplus® film types from Storopack.
