PELASPAN® BIO

The optimum, environmentally friendly packaging solution

- 100% compostable
- Made of renewable raw materials
- Fast packaging guaranteed
- High padding effect
- Light-weight, excellently free-flowing
- Dust-free, antistatic, abrasion resistant
- Cost-effective
- Can be used without prior training

More than just an environmentally friendly packaging material

PELASPAN® BIO

is an innovation in
the field of pourable
padding materials

(loose fill) from

Storopack: A product

made only from corn

starch, which can therefore

be composted without leaving

a trace.

The special feature of PELASPAN® BIO is the stable S-form, which has already proved reliable with loose fill made of Styropor®. On account of the S-form, the individual chips get caught on one another and form a pad around the products being packaged, so that the goods are fixed and stabilized in the package.

As PELASPAN® BIO is produced only from natural raw materials, it is completely compostable and can be simply disposed in normal domestic waste.

PELASPAN® BIO can be easily integrated into your existing packaging process. Our packaging specialists will be glad to put together a custom-made integrated solution to match your particular shipping and packaging situation.
