

## Consultancy & development

Even before product development gets under way, we offer our customers advice and support. Individually tailored solutions are developed in close customer cooperation.

### Thinking outside the box

Curiosity and receptiveness to unusual solutions have always been the driving force behind the best innovations. In our company, research, experimentation, testing, optimization and variation are on-going processes. We are only satisfied with the very best solutions for our customers.

## Consultancy & development

### What drives us forward

Innovative products which are ahead of their time. Unmistakable, highly functional design. Creative geometries. Products for new process technologies. Moldings complying to the most stringent aspirations. Keeping abreast of developments means being a step ahead of the game. We see our role primarily as that of a competence and technology center. This is the only way to guarantee our customers high-caliber, future-proof solutions at short notice.

CAD-development

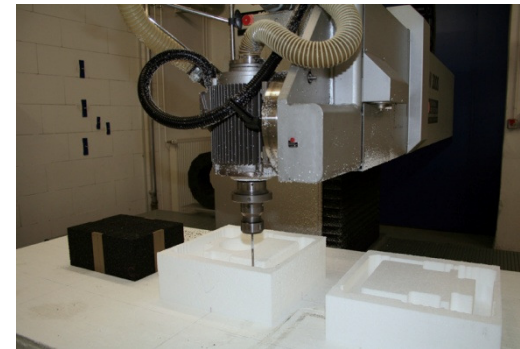

Drop testing facility

## Consultancy & development

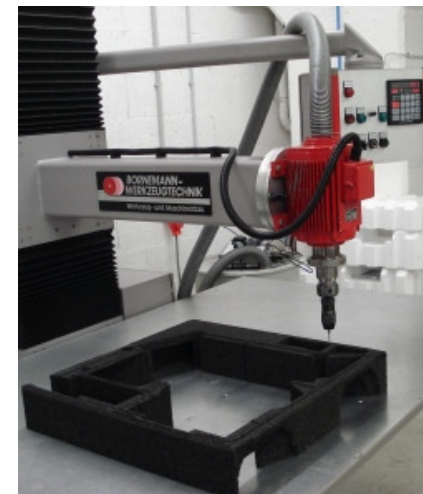

### What we offer:

- Innovative software
- Research unit
- Test labs with drop testing facility
- Prototype center CNC milling machines
- Climate chamber for temperature simulation
- Model building
- IT-based supply chain management
- Online shop

Please contact us regarding the subjects polystyrene packaging, EPS packaging, thermo boxes, mounting parts made of EPP, crash pad elements made of EPS and EPP. We develop the adequate molded parts made of high-density and low-density foam.
