

## Production

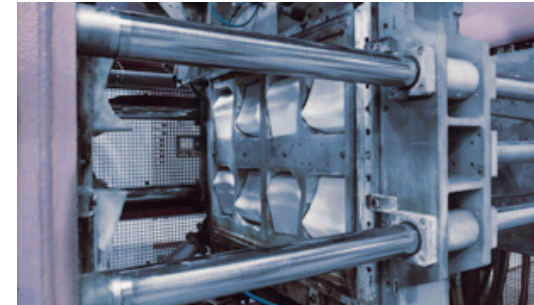

### **The central focus: production**

Storopack manufactures protective packaging, transport packaging and customized technical moldings.

### **Tools: expertise that transcends borders**

Our customer-specific tools are generally made of aluminum. Their attractiveness to customers is enhanced by short delivery times, favorable tooling costs and a long service life.

Within the Molding Division, these tools offer compatibility with a large number of machines, allowing production to be quickly and simply relocated to any of our different branches.
