

Quality

Quality as the primary objective

Product and service quality have to be right – on every occasion, with the utmost reliability. This is our primary objective. Health and safety are other objectives accorded high priority in our company which in turn exert a positive impact on the quality of our products.

Our products and services are designed to benefit mankind. We aim to stand for values which are for the good of all: Our customers, our employees and the countries in which we operate.

By regular dialogue with our customers and business associates, we are able to guarantee that actions to improve customer satisfaction are initiated when and where they are needed.

Quality

Our quality management system is kept continuously up to date as the result of an on-going process of review and further development. This ensures the continual improvement of our processes. Our employees receive regular training and we actively encourage and promote quality awareness. Certificates awarded by TÜV, AFAQ and LGAI testify to the outstanding quality of our products and processes.

Environment

We and our workforce care about the environment

We attach great importance to environmental awareness and environmental management. Our employees are all encouraged to be environmentally aware and to display a sense of responsibility. Using an environmentally friendly production method involving steam benefits mankind and nature in equal measure.

Environment

Savings for the sake of the environment

While ensuring that the packaged product remains perfectly protected, we are still concerned to examine ever new ways to reduce the input of materials and energy. We work to ensure optimum care of existing resources, and wherever possible to reduce their utilization. Used moldings can be simply returned to the material loop, and can be recycled for maximum benefit in terms of material, raw material and energy savings.
