STOROPack

Air cushions for sensit

Airplus from Storopack. The ideal combination of safety plus quality plus environmental awareness. The dust free air cushion system serves as both cushioning and filler. There are many good reasons for using air cushion packaging. It's light weight, so it helps to cut transport costs, and it improves safety at work. Before it reaches the packing station, the film is just film, so you can budget for minimal storage in your facility.

Five products

Supplied in compact rolls, the film remains flat until it is filled at the packaging station

Safe and sound, neat and clean

- Airplus is safe. Excellent cushioning ensures optimum protection for your product.
- Airplus cuts costs. The film takes up minimal space in storage; it stays flat all the way to your packing station. Its weight by volume is low, so the impact on transport costs is negligible.
- Airplus is flexible. Pick the machines and the films that make the ideal solution, whatever your requirements.
- Airplus is easy. The rolls of film are light and easily handled. The machines are easy to operate, fast and reliable.
- Airplus is light weight packaging. It's reusable. The film itself is recyclable.

AIRplus® by STOROPACK

Simplicity at its finest

Airplus systems from Storopack are easily tailored to individual requirements, providing the perfect solution that integrates effortlessly into any packaging line.

STOROPACK

Integration. The perfect fit.

Airplus is an end-to-end system. The piping, blowers, silos and other accessories enable you to set up the configuration for any number of integrated packing stations.
