

Clinic-System

Clinic-System for the Right Temperature in the Ward

Whether pain medications, antibiotics, cytostatic drugs, or other types of medicine, hospital pharmacies need to get important medications to patients in the ward or other locations uncompromised, often in a short period of time. The challenge: the medications are frequently temperature sensitive, while the hospitals are large, the routes long, and the temperature conditions along the way dependent on the time of year and distance.

Optimal Temperature Guaranteed

That's where the Storopack Clinic-System comes in: the tailored segment solution for hospitals ensures that life-saving, temperature sensitive medications such as cytostatic drugs reach the ward at the appropriate temperature. This is made possible by the proven phase change material (PCM) technology of the accumulators made of robust, hard plastic, whose melting range is located precisely inside the temperature ranges of 2 to 8°C or 15 to 25°C.

The system solution consists of very few, optimally coordinated components that can be used repeatedly and reordered individually. If the box needs to be replaced, the accumulators and closures can still be used.

Clean System Solution

The Clinic-System is the ideal solution for more than just the optimal temperature. The boxes for temperature-controlled transport close up tight and feature additional sealing with a lining and closure seal, thus ensuring reliable leakage protection at all times. Because the overall system solution is made of durable EPP, it can be used repeatedly, effectively cleaned, and still maintains its clean appearance in everyday hospital use.

The Benefits at a Glance

- Just the right temperature: optimal temperature range thanks to PCM accumulators
- Leakproof: boxes close up tight and feature additional sealing
- Robust: EPP boxes can be used repeatedly
- Clean: the material can be effectively disinfected
- Straightforward: colored markings reveal contents and application at a glance
- Cost-effective: repeated use reduces costs and conserves resources
- Simple: all system components can be reordered individually but also fit together
- Practical: orders can be picked and placed directly in the plastic tray saving time while the accumulator reaches the optimum temperature before also being placed inside the box
- Flexible: depending on content volume, a 12 or 27-liter box can be selected

Simple to Tell Apart

Colored specks specify the application and contents of the boxes, so that, for instance, boxes for cytostatic drugs can be identified at a glance.
