

Designed to Be Compact and Fast

Storopack launches new PAPERplus® Track paper cushion system

Product Launch
PAPERplus® Track

Metzingen, February 2019. The new machine by the Metzingen-based packaging specialist is designed for applications in which high throughput and secure packaging material are a must: PAPERplus® Track produces paper cushion in mere seconds directly at the packing station, delivering highly effective padding while using less material. Thanks to the sturdy padding, the system is ideal for medium to large packages weighing between five and 50 kilogram – the perfect solution for shipping spare parts, electronic components, and ceramics. PAPERplus® Track is compact in size and, like all other Storopack padding systems, can also be integrated into existing distribution lines. As a result, PAPERplus® Track guarantees optimal packing processes and reduces process costs. The machine is now available.

The Perfect Fit for Every Product

Thanks to the paper cushions, shipping goods can be reliably blocked and braced and also protected from knocks. For even better product protection and more efficient use of material, the volume of the paper cushions can be specifically adjusted for every product. Users also benefit from the especially safe blade-free technology of the PAPERplus® Track: the paper is perforated, making it extremely easy to individually separate each paper cushion mechanically, which in turn minimizes offcuts.

Everything about the PAPERplus® Track is designed for speed: thanks to the on-demand function, the system automatically produces more paper cushions once they have been removed. Another advantage is that the machine features a touch screen and can connect to Wi-Fi. This way, the paper cushion system can also be controlled online from an external location via smartphone or tablet. PAPERplus® Track is low-maintenance, works quietly, and enables fast and simple paper replacement.

About Storopack

Storopack was founded as a family business in 1874 and has operated as Storopack Hans Reichenecker GmbH based in Metzingen, Germany, since 1959. As a specialist for protective packaging, the globally active company group Storopack is organised in the two business areas of Molding and Packaging. The Molding division, with certified production locations in Europe and China, supplies made-to-measure protective packaging and technical form parts in expanded foams for various areas of industry. The Packaging division supplies flexibly applicable protective packaging with air cushions, paper pads, PU foam packaging systems and pourable padding materials and is represented by its own production locations and branch offices in Europe, North America, South America, Asia and Australia. 2,500 members of staff work for Storopack worldwide. In the year 2017, Storopack generated sales of 454 million Euros. The products are available in more than 50 countries. Further information on www.storopack.com
